

Property Management Professionals Website Master Brief

Complete website concept content and Claude build instructions

Prepared for Jocel and Bob | Corrected September 30, 2026 | Solid-background full-site brief

Build the complete Property Management Professionals website as one coherent project. Organize the project by page, then divide each page into separately editable sections. This revision replaces the earlier header-only task scope. The site will be designed and previewed in Claude and VS Code, with separate GHJ Custom JS/HTML section exports for installation later.

This brief defines the public website, its copy, its design, the owner lead journey, and the planned connections to operational systems. All listed pages should be built in preview, including useful empty states where approved listings or integrations are not available. Publishing and activating automations remain separate launch tasks.

1 Website concept

Positioning: Practical property management for long-term and short-term rental owners in East Central Minnesota. The site should help an owner understand the services, see the approach to property care, and request a management conversation.

Primary audience: Owners seeking management support. Both long-term rental owners and vacation rental owners belong in the owner journey.

Secondary audiences: Long-term renters looking for an available home, and vacation guests exploring a stay. Give each a clear destination without overwhelming the owner-focused home page.

Main action: Request a Management Quote. The destination is a dedicated owner form. A quote request is an inquiry, not a pricing calculator or a promise of acceptance.

Voice: Professional, welcoming, local, and direct. Describe the actual work: leasing coordination, communication, maintenance coordination, turnovers, and reporting. Use confirmed service scope. Avoid inflated claims or language that makes this sound like a luxury hotel, real estate sales agency, or investment advisory service.

Concept boundaries: Property Management Professionals has its own website and GHJ subaccount. Property Maintenance Professionals and Property Investment Professionals are separate projects. Confirm the management DBA and exact legal footer wording with Bob before launch.

2 Design direction

Create a distinctive but restrained website. Use architectural alignment, careful typography, real property photography, and a consistent visual rhythm. A visitor should recognize the business and find the next step quickly.

The home page should have an asymmetric split hero, with readable owner-focused copy on one side and an approved property photo on the other. Use a subtle gold frame or architectural line as a recurring detail. Lower

sections should vary naturally: a two-service comparison, a concise approach section, a three-step process, and a final owner CTA. Avoid using the same card grid in every section.

The header should have a refined horizontal logo or wordmark area. Use the approved logo without distorting it; if absent, use the full business name as a clean text wordmark. A banner-shaped wordmark means a wide horizontal treatment, not an advertising banner. Keep navigation compact and the quote button clear.

Role	Color	Hex
Headings and primary buttons	Deep navy	#172D3B
Main background	Warm ivory	#F8F5EC
Restrained accent	Muted gold	#AD8950
Small accent text	Bronze	#70562B
Body text	Slate	#43535B
Cards and reading areas	Warm white	#FFFEFB
Soft section background	Pale sage gray	#E9EDE9

Use navy and slate for readable text. Gold is for small details, outlines, and selected accents; check contrast for every text and button combination. Use Manrope for headings and navigation, and DM Sans for body copy, with local sans-serif fallbacks. Keep headings in sentence case. Make the design work if web fonts fail to load. Set explicit solid page and section backgrounds, including standalone GHLE export wrappers. Use warm white for the header, ivory for the page, sage gray for selected alternate sections, and navy with light text for the footer. Section 13 defines the typography and spacing rules.

Use modest corner radii, light borders, and minimal shadows. Avoid metallic gradients, excessive rounded pills, glass effects, continuous animations, oversized empty areas, and invented statistics. Respect reduced-motion settings. Keep mobile layouts useful rather than simply shrinking the desktop layout.

3 Website journeys and systems

Visitor	Website destination	Operational responsibility
Long-term rental owner	Long-term services and management quote	GHLE owner lead follow-up
Vacation rental owner	Short-term services and management quote	GHLE owner lead follow-up with STR service interest
Long-term renter	Verified listings and preliminary prequalification	DoorLoop for approved listing and leasing process

Visitor	Website destination	Operational responsibility
Vacation guest	Vacation property and availability destination	OwnerRez or selected PMS for reservations; GHL for permitted marketing

Owner journey: Website → dedicated owner form → GHL owner pipeline → management consultation → proposal → agreement and onboarding.

Long-term renter journey: Approved listing → preliminary prequalification → team review → approved showing and application steps → screening and leasing in DoorLoop. Final application versus showing order should follow Bob's approved operating procedure. Sensitive screening records stay out of owner and guest campaigns.

Vacation guest journey: Airbnb + Vrbo + direct-booking website → OwnerRez or selected PMS → appropriate guest CRM data into GHL. OwnerRez handles the reservation calendar, rates, booking rules, guest operational messages, and booking records. GHL handles repeat-stay and other permitted marketing.

4 Booking and integration plan

Working recommendation: Evaluate OwnerRez first because Bob currently prefers it. Compare Lodgify if website-building ease, onboarding, total cost, or operational fit makes it necessary. Neither system is connected by this brief.

OwnerRez documents channel integrations for Airbnb and Vrbo, direct-booking widgets, hosted booking websites, and Zapier integration. Lodgify also documents booking widgets and channel management. Select after testing the actual properties, payment setup, booking rules, and guest-data requirements; do not treat marketing descriptions as evidence that the account is configured.

Start with an approved PMS-hosted booking destination linked from the management website. Later, embed its booking widget if that improves the guest experience. Do not build a custom availability calendar, price calculator, checkout, or reservation database in the GHL website.

Centralize reservation and financial records as far as each channel supports. Payment collection still follows the channel's and processor's rules; do not assume Airbnb card charging transfers to the PMS. Confirm merchant account, taxes, fees, deposits, cancellation rules, payment schedules, and refunds during PMS onboarding.

For PMS-to-GHL integration, evaluate a supported automation connector such as Zapier before choosing a custom integration. Verify available events, guest lookups, property IDs, reservation changes and cancellations, duplicate handling, retries, and error alerts. API credentials belong in secure configuration, never in a frontend HTML file.

Map only necessary data: PMS guest ID, approved contact details, property ID/name, booking source, last completed stay, selected interests, and explicit marketing preferences. Keep repeat-stay history in the PMS or a suitable related data structure; one contact field should not pretend to represent every reservation.

A phone number or booking record does not automatically establish marketing permission. Store email and SMS preferences separately, with source, timestamp, wording/version, and withdrawal status. Unknown permission means no automatic marketing enrollment. Do not overwrite an unsubscribe during later imports. Airbnb may not send the guest's real email to OwnerRez; collect details only through appropriate permitted paths.

5 GHJ setup and to do list

This is the implementation plan, not a statement that any configuration is complete.

Account foundation: Confirm the management subaccount ID, business branding, approved domain, info@ sender/reply address, management phone, time zone, team access, sending-domain authentication, email unsubscribe handling, and SMS registration status before enabling sends.

Owner pipeline: Create PM Owner Leads with stages New Inquiry, Contact Attempted, Consultation Scheduled, Property Review, Proposal Sent, Follow Up, Won, and Lost. Track long-term versus STR service interest through a field and role-specific tags. Avoid creating duplicate opportunities for repeated submissions about the same active inquiry.

Guest pipeline: Keep a separate STR Marketing Inquiries pipeline for genuine direct-stay inquiries or campaign replies, with stages New Inquiry, Contacted, Referred to Booking Site, and Closed. Reservations remain in the PMS; do not create a GHJ booking pipeline or an opportunity for every imported guest.

Tags and fields: Use documented tags such as ROLE_OWNER, ROLE_APPLICANT, ROLE_STR_GUEST, OWNER_LONG_TERM, OWNER_STR, SOURCE_WEBSITE_QUOTE, and property-specific guest tags. A person may have more than one role, so apply workflow eligibility checks rather than assuming tags are exclusive. Use fields for rental type, property city, unit count, occupancy, support needed, preferred contact method, timing, PMS guest ID, and channel-specific marketing choices.

Owner form: Required fields are name, email, property city/state, rental type, and support needed. Optional fields are phone, property address, number of units/properties, occupancy, desired start timing, and preferred contact method. Keep any messaging opt-ins separate from submitting an inquiry, with wording matching the actual program.

Owner consultation calendar: Configure a management consultation calendar with Bob's confirmed availability, duration, buffers, time zone, assigned staff, and reminders. This calendar schedules conversations; vacation reservations use the PMS.

Owner workflow: Form submission → create/update contact → classify owner/rental type → create/update opportunity → save one useful inquiry summary → send one internal notification → send an appropriate acknowledgment → assign a follow-up task. Stop scheduled follow-up on a reply, booked consultation, closed lead, or opt-out as applicable. Avoid blank notes, duplicate notifications, and indefinite repeated enrollment.

Guest workflows: Start with a documented eligible audience and verified destination. Then configure property segmentation, seasonal offers, repeat-stay invitations, referrals, and direct-booking follow-up. Check consent

and suppression before each send. PMS operational messages and GHL marketing should not duplicate one another.

Applicant separation: Keep preliminary rental submissions out of both owner sales and STR promotions. Review the current GHL form before deciding whether it stays as a front-end preliminary form or is replaced by an approved DoorLoop destination. Do not create a second application database without a defined handoff.

6 Project organization and deliverables

Build all pages in one project, but give each page its own directory and each section its own file. Use the existing project framework if suitable. Do not install a new framework or create a second application unnecessarily.

Location	Purpose
shared	Header, footer, buttons, design tokens, and common behavior
pages/home	Home page assembly and its numbered sections
pages/long-term-rental-management	Long-term service page and sections
pages/short-term-rental-management	STR owner service page and sections
pages/about and pages/faqs	About and FAQ pages and sections
pages/management-quote	Dedicated owner inquiry page and sections
pages/available-rentals	Approved listing cards or honest empty state
pages/rental-prequalification	Separate applicant page and form slot
pages/vacation-rentals	Property cards and approved booking destinations
pages/thank-you	Separate owner and applicant confirmations
pages/legal	Privacy and terms review drafts
exports/ghl	Per-page folders containing separately installable section snippets
docs	Brief, route map, section inventory, and installation guide

Use descriptive ordered names such as 01-hero, 02-management-services, and 03-owner-approach. Maintain one reusable header/footer source, then generate the standalone exports as needed. Every assembled preview page must load the shared navigation and its own sections in the right order.

GHL exports must contain scoped HTML/CSS and only necessary JavaScript. Do not include html, head, or body wrappers in a section snippet. Avoid global selectors that style other GHL elements. Each section must be usable

without relying on an uninstalled sibling section. Give every exported section wrapper an explicit solid background from the approved palette. Match the assembled preview and GHL section/row backgrounds; do not rely on a transparent wrapper. Document the required full-width GHL section/row settings and all replacement points.

A standalone preview demonstrates design; it does not automatically appear in GHL. Provide a README with how to run or open the preview, the route/section inventory, the export locations, and the exact installation steps. Do not connect services or publish as part of the design build.

7 Navigation and route map

Desktop header: Home · Management Services with Long-Term and Short-Term dropdown links · Available Rentals · Vacation Rentals · About · FAQs · Request a Management Quote.

Mobile header: readable horizontal wordmark, visible quote action where space permits, and an accessible menu. The mobile menu contains every desktop destination. A sticky header must not cover anchors, dropdowns, or page content.

Page	Path	Main action
Home	/	Request a Management Quote
Long-Term Rental Management	/long-term-rental-management	Owner quote
Short-Term Rental Management	/short-term-rental-management	Owner quote
About	/about	Owner quote
FAQs	/faqs	Owner quote
Management Quote	/management-quote	Owner form
Available Rentals	/available-rentals	Approved listing and prequalification
Rental Prequalification	/rental-prequalification	Separate applicant form
Vacation Rentals	/vacation-rentals	Approved property booking destination
Owner Thank You	/management-thank-you	Return to services
Applicant Thank You	/prequalification-thank-you	Return to listings
Privacy Policy	/privacy-policy	Read policy
Terms of Service	/terms-of-service	Read terms

Thank-you pages stay out of navigation and use noindex. Their confirmation must follow a successful form submission, not merely a button click. Legal pages must remain clearly marked as review drafts in preview until verified.

8 Page content and section map

The following copy is the working content foundation. Preserve its factual meaning while making only light readability edits. Editorial notes are build instructions and must stay out of published visitor copy. In the design preview, photo descriptions and dimensions must appear inside their visible placeholders; remove those labels when approved real images replace them. Verify service scope and every bracketed fact before publishing.

Home

SEO title: Property Management in East Central Minnesota

Meta description: Property management for long-term and short-term rentals in East Central Minnesota. Tell us about your property and request a management quote.

Hero

Visible copy

H1: Property Management in East Central Minnesota

Owning a rental takes time, attention, and the right people. Property Management Professionals helps owners coordinate leasing, communication, maintenance, and the day-to-day work of caring for a rental. Tell us about your property and the support you need.

Button: Request a Management Quote → /management-quote

Image placeholder: An approved exterior of a well-kept managed rental, with clear architecture and room for text beside it. Recommended source: **1920 × 1200 px**; mobile-friendly subject near center. Alt text should describe the actual property, without implying a location or management relationship that has not been confirmed.

Two ways we help owners

H2: Management that fits your rental

Long-term rentals: Help with rental marketing, leasing steps, tenant communication, rent collection, reporting, and maintenance coordination within the agreed scope.

Button: Explore Long-Term Management → /long-term-rental-management

Short-term rentals: Help coordinating listings, guest communication, cleaning, property needs, and performance reviews within the agreed scope.

Button: Explore Short-Term Management → /short-term-rental-management

Image placeholders: Two actual property images, one residential long-term rental and one vacation rental. **1200 × 900 px each**. Confirm property type and photo permission before use.

Our approach

H2: An owner's approach to property care

We pay attention to the details that matter to an owner: the condition of the property, the people involved, and the cost and timing of the work. We discuss responsibilities and approval limits with you before management begins.

How it starts

H2: Getting started is simple

1. Tell us about your property and your goals.
2. Review the services and management approach with our team.
3. Agree on the scope and next steps before onboarding.

Button: Tell Us About Your Property → /management-quote

Other visitor paths

H2: Looking for a home or a getaway?

Browse our current long-term rentals or explore vacation properties through their approved booking pages.

Buttons: View Available Rentals → /available-rentals; Explore Vacation Rentals → /vacation-rentals

Long Term Rental Management

SEO title: Long-Term Rental Management | East Central Minnesota

Meta description: Get help with leasing, tenant communication, rent collection, and maintenance coordination for your East Central Minnesota rental. Request a quote.

Hero

H1: Long-Term Rental Management for Local Property Owners

From vacancies and tenant questions to payments and property care, rentals need steady attention. We help owners in East Central Minnesota manage these responsibilities with a clear plan for the property.

Button: Request a Management Quote → /management-quote

Image placeholder: Approved exterior or bright interior of a real long-term rental. **1600 × 1000 px.** Avoid showing an occupied resident's belongings without permission.

Service scope

H2: Support throughout the rental cycle

Marketing and leasing: Organize property details, advertise approved vacancies, and coordinate inquiries and leasing steps.

Screening and placement: Coordinate applications and screening under the property's approved criteria and applicable requirements.

Rent collection and reporting: Track payments and provide reporting included in your agreement.

Tenant communication: Handle routine questions and coordinate next steps when a concern comes up.

Maintenance coordination: Track repair needs and arrange work within the agreed approval process.

Image placeholder: Real, approved turnover or property-care photo. **1200 × 900 px;** choose a genuine scene rather than staged paperwork.

Scope and transition

H2: Know what is included

We review your property, occupancy, condition, and goals before recommending an arrangement. Services, fees, maintenance responsibilities, and approval limits are explained in the management agreement.

H2: Have a vacancy or an existing tenant?

Tell us where the rental is located and what help you need. We can discuss leasing a vacancy or transitioning an occupied property into management.

Final action

H2: Start with your property details

Share the location, number of units, current occupancy, and your main concerns. We'll use that information to discuss whether our services fit.

Buttons: Tell Us About Your Rental → /management-quote; Read Owner FAQs → /faqs

Internal link: If mentioning repair or remodeling services, link to the separate Property Maintenance Professionals website. Do not describe standalone tenant placement as a package until Bob confirms it.

Short Term Rental Management

SEO title: Short-Term Rental Management | East Central Minnesota

Meta description: Get support with vacation rental listings, guest communication, pricing, and turnovers in East Central Minnesota. Discuss your property with our team.

Hero

H1: Short-Term Rental Management in East Central Minnesota

A vacation rental needs attention before, during, and after every stay. We help owners coordinate the people and tasks that keep the property ready for guests.

Button: Discuss Your Vacation Rental → /management-quote

Image placeholder: Approved vacation-home exterior or inviting living space. **1600 × 1000 px.** Avoid suggesting a specific amenity unless the pictured home offers it.

Service scope

H2: Support for your property and guests

Listings: Keep descriptions, photos, and guest information organized and accurate.

Pricing strategy: Review pricing and availability as part of the agreed scope.

Guest communication: Coordinate questions and stay information.

Turnovers: Coordinate cleaning between stays and follow up on reported property needs.

Performance: Review property activity and discuss practical improvements.

Image placeholder: Real turnover-ready room or approved guest space. **1200 × 900 px.**

Process and final action

H2: A plan built around your rental

We start with your property, current booking channels, and goals. Then we discuss responsibilities, communication, and the services that fit your setup.

H2: Protect the guest experience

Accurate listings, clear arrival information, and coordinated turnovers help guests know what to expect. Defined responsibilities help the owner and team respond when something needs attention.

H2: Let's talk about your property

Already hosting or getting ready for your first guests? Tell us about the property and where you need support.

Buttons: Request a Management Quote → /management-quote; Explore Our Vacation Rentals → /vacation-rentals

Claim check: Do not say OwnerRez, Vrbo, rate synchronization, or direct booking is connected until tested.

About

SEO title: About Us | Property Management Professionals

Meta description: Meet Property Management Professionals and learn about our practical approach to rental management and property care in East Central Minnesota.

Hero

H1: A Practical Approach to Rental Property Management

Property Management Professionals supports rental owners in East Central Minnesota. We bring an ownership perspective to the daily work: caring for the property, coordinating people, and keeping track of what needs attention.

Image placeholder: Approved image of Bob or the team at a property. **1600 × 1000 px** for a wide hero; do not use an unapproved personal photo.

Leadership

H2: Led by Bob Blaisdell

Bob leads the business with a focus on property ownership, management, and ongoing property care. The goal is practical support with clear responsibilities for every property.

Portrait placeholder: Bob's approved headshot, **800 × 1000 px**. Alt text: "Bob Blaisdell" plus his confirmed public title.

Principles

H2: What guides our work

Clear responsibilities: Agree on what is included, who handles each task, and when owner approval is needed.

Practical property care: Pay attention to maintenance needs and coordinate the appropriate next steps.

Organized communication: Keep owners, residents, guests, and service providers informed about relevant work.

Related business and CTA

H2: Management and maintenance support

We coordinate property needs within the management agreement. For separate repair and remodeling services, explore Property Maintenance Professionals.

Button: Explore Maintenance Services → <https://www.propertymaintenanceprofessionals.net/>

H2: Tell us what you need help managing

Share your property location, rental type, and goals so we can discuss the next step.

Buttons: Request a Management Quote → </management-quote>; Explore Long-Term Management → </long-term-rental-management>; Explore Short-Term Management → </short-term-rental-management>

Identity check: Confirm Bob's preferred title and the exact legal/DBA relationship before adding either as a public claim.

FAQs

SEO title: Property Management FAQs | Property Management Professionals

Meta description: Answers about rental management services, fees, maintenance, owner inquiries, and rental prequalification in East Central Minnesota.

Intro

H1: Property Management Questions, Answered

Here are the questions owners and renters often ask before taking the next step. If your property has a particular need, send us the details.

For owners

H2: Questions from property owners

Do you manage long-term and short-term rentals?

We provide support for both rental types. The services and responsibilities are discussed for each property and recorded in the management agreement.

Where do you provide services?

We focus on East Central Minnesota. Send us the property location so we can confirm whether it falls within our service area.

What does property management cost?

Fees depend on the property and agreed services. Request a quote so we can review your needs and explain the applicable fees.

Who pays for repairs?

The agreement explains maintenance responsibilities, charges, and owner approval requirements. We review those details before management begins.

Can you help if my rental is vacant?

Tell us about the vacancy, property condition, and intended availability date. We can discuss rental marketing and leasing support.

Do you offer guaranteed rent?

Hold this question until Bob confirms that a selected-property guaranteed-rent or master-lease arrangement is currently offered and approves the wording.

For renters and guests

H2: Questions about rentals

How do I request a showing?

Review an available property and complete our preliminary prequalification form. After review, our team will contact you about showing availability and next steps. Submission does not guarantee a showing or approval.

How do I book a vacation rental?

Visit Vacation Rentals and follow the approved booking link for the property. Review live availability, total price, and terms during the booking process.

Buttons: Ask About Management → /management-quote; View Available Rentals → /available-rentals; Explore Vacation Rentals → /vacation-rentals

Image placeholder: Optional small actual property image alongside the intro, **1000 × 750 px**. The FAQ should remain easy to scan without one.

Management Quote

SEO title: Request a Property Management Quote | East Central MN

Meta description: Tell us about your long-term or short-term rental in East Central Minnesota and discuss management services for your property.

Intro

H1: Tell Us About Your Property

Looking for help managing a long-term rental or vacation property? Share a few details below. Our team will review your inquiry and contact you about your needs and next steps. If you are unsure what services you need, tell us what takes the most time or causes the most concern.

Image placeholder: Actual property detail or warm exterior, **1200 × 900 px**. Keep the form visible without scrolling through an oversized image.

Owner form

H2: Request a management conversation

[Insert a new, dedicated GHL property-owner form here.] The form should request name, email, city/state of property, rental type, and what help is needed. Phone, address, unit count, occupancy, contact preference, and timing can be optional according to the final form design. The form's own submit action should lead to /management-thank-you after a successful test.

After submission

H2: What happens next?

We review your property details, clarify the support you need, and discuss whether our services fit. We provide proposed fees and scope before you agree to management services.

H2: Looking for a rental instead?

Buttons: View Available Rentals → /available-rentals; Complete Rental Prequalification → /rental-prequalification

Routing: Owner form submissions belong in the owner inquiry path. They should not trigger applicant screening or vacation guest promotions. Review final consent wording and actual messaging setup before enabling texts.

Available Rentals

SEO title: Available Rentals in East Central Minnesota

Meta description: Explore current long-term rental listings in East Central Minnesota. Review property details and complete preliminary prequalification to get started.

Intro

H1: Find Your Next Rental in East Central Minnesota

Browse our current long-term rental listings. Review each property's details, rent, and availability before completing the preliminary prequalification form.

Current listings

H2: Current rental listings

[Insert only verified, approved, currently available listing cards.]

Card template: [Property name] • [Verified city, MN]

[Bedrooms] bedrooms • [Bathrooms] bathrooms

Monthly rent: [current rent] • Available: [confirmed date]

[One sentence with a verified feature.]

Buttons: View Property Details → [verified listing URL]; Complete Rental Prequalification → /rental-prequalification

Image placeholder per card: Approved current property image, **1200 × 900 px**, consistent 4:3 crop. Use an honest alt description of the room or exterior.

If no listing is ready, display: **We do not have any available long-term rentals listed right now. Please check back for updates.**

Process

H2: How to get started

1. Choose a property that interests you.
2. Complete preliminary prequalification.
3. Our team reviews your information and contacts you about showing availability and next steps.

Submitting information does not guarantee approval, a showing, or a reserved property.

Verification: No current public listing is approved by this brief. Check availability and advertising approval in DoorLoop and with Bob. Do not copy the internal address roster into this page. Each approved listing detail view also needs verified fees, deposits, lease terms, and requirements.

Rental Prequalification

SEO title: Rental Prequalification | Property Management Professionals

Meta description: Interested in one of our long-term rentals? Complete preliminary prequalification so our team can review your information and next steps.

Intro

H1: Interested in Renting One of Our Properties?

Complete the preliminary prequalification form below. Once we review your information, we'll contact you about showing availability and next steps. Have the property name or address, desired move-in date, and requested rental and employment information ready.

Existing form

H2: Complete your preliminary prequalification

[Reserve a separate applicant form slot. The previously supplied GHl form ID is 4hpxZOMnPuBipucVpDwm; inspect and approve it before embedding. If Bob selects a DoorLoop preliminary form instead, use that approved destination.] Keep the form's own submit button. Do not add a separate page-level submit button. After testing, direct successful submissions to /prequalification-thank-you.

Expectations

H2: What happens after you submit?

Our team reviews the information and follows up about the property you selected. Additional application and screening steps may be required. Submission does not guarantee approval, a showing, or a reserved property. Lease, deposit, and move-in requirements are explained during the leasing process.

Button: Back to Available Rentals → /available-rentals

Image placeholder: Optional small approved rental exterior, **1000 × 750 px**. Avoid making a sensitive form difficult to use on mobile.

Before launch: Inspect the existing form and replace any placeholder policy links with approved pages. Have Bob and a qualified housing reviewer check its questions about children, local origin, criminal/eviction history, fees, and move-in funds against actual policy and applicable rules. The certification checkbox is not an SMS marketing opt-in. Keep submitted screening details out of sales and guest campaigns.

Vacation Rentals

SEO title: Vacation Rentals in East Central Minnesota

Meta description: Explore East Central Minnesota vacation properties, compare verified features, and use each property's booking link for current availability and rates.

Hero

H1: Find Your Next East Central Minnesota Getaway

Explore our vacation rentals and find a property that fits your trip. Follow each property's booking link to review current availability, rates, and stay requirements.

Image placeholder: One approved vacation home landscape, **1920 × 1200 px**. Confirm the region of every property promoted under this heading.

Property cards

H2: Explore our properties

[Add only approved property cards with current details and working destinations.]

Card template: [Property name] • [verified location]

[One accurate sentence about the stay.]

Sleeps [confirmed occupancy] • [bedrooms] bedrooms • [bathrooms] bathrooms

[Two or three verified amenities]

Button: View Property & Availability → [confirmed booking page or approved current listing]

Image placeholder per card: Approved property exterior or distinctive room, **1200 × 900 px**, consistent crop.

Booking expectations

H2: Before you book

Review your dates, guest count, total price, house rules, and cancellation terms on the property's booking page. Availability and pricing are confirmed during the reservation process.

Optional guest updates

H2: Hear about future stays

Interested in occasional vacation rental updates and seasonal offers? Sign up for the updates you choose.

[Separate guest email signup form, only when sender identity and unsubscribe handling are ready.]

Owner path

H2: Own a vacation rental?

Learn about our short-term rental management services.

Button: Explore Short-Term Management → /short-term-rental-management

Booking check: Do not show “Book Direct,” live rates, or an untested PMS connection. Use the approved current listing link until a direct booking flow works.

Thank you pages

Both pages should use **noindex**, stay out of navigation, and appear only after the matching form succeeds. A simple, calm confirmation layout needs no image; an optional approved property detail image can be **1000 × 750 px**.

Owner

SEO title: Inquiry Received | Property Management Professionals

H1: Thanks for Telling Us About Your Property

We've received your management inquiry. Our team will review the details and contact you to discuss your property and the support you need. If you have more to share, contact us at [confirmed management email].

Buttons: Explore Our Management Services → /long-term-rental-management; Back to Home → /

Applicant

SEO title: Prequalification Received | Property Management Professionals

H1: Your Preliminary Prequalification Has Been Received

Thank you for sending your information. Our team will review it and contact you about showing availability and next steps for the property you selected. This confirmation does not mean you have been approved, scheduled for a showing, or assigned a reserved property.

Buttons: View Available Rentals → /available-rentals; Back to Home → /

For optional guest signup, an inline message can say: “Thanks for signing up. We’ll send the vacation rental updates you chose. You can unsubscribe at any time.”

Privacy Policy review draft

SEO title: Privacy Policy | Property Management Professionals

Meta description: Learn how Property Management Professionals handles website inquiries, rental information, guest communications, and communication choices.

This page needs a factual and qualified review before publication. If the earlier legal draft is supplied, review it against the actual setup before using it. Otherwise create a clearly marked review draft; do not invent operator or contact details. The visual section map is:

1. **H1: Privacy Policy** — Effective date, confirmed legal operator/DBA, privacy email, mailing address, phone.
2. **Information we collect** — Owner inquiry data, rental prequalification data, guest preferences, and booking-provider information as actually collected.
3. **How we use information** — Respond to inquiries, coordinate services, review rental submissions, maintain records, and send only chosen marketing.
4. **Service providers and sharing** — Name actual providers such as GHIL and DoorLoop, and the selected booking provider when live; describe actual mobile opt-in sharing practice.
5. **Your communication choices** — Email unsubscribe, SMS STOP/HELP, and contact route.
6. **Cookies, retention, and security** — Describe tools and practices actually used.
7. **Other websites and policy changes** — External booking pages and revised effective dates.

Design: Narrow reading column, clear H2 headings, no decorative hero that pushes the policy down. No image needed. Do not publish bracketed placeholders or assume the policy describes systems that have not been configured.

Terms of Service review draft

SEO title: Terms of Service | Property Management Professionals

Meta description: Read website and messaging terms for Property Management Professionals, including inquiries, rental information, and communication preferences.

Use an approved legal draft if supplied. Otherwise prepare a review draft using verified business and messaging details. Section map:

1. **H1: Terms of Service** — Effective date and confirmed operator/contact information.

- 2. **Website information and inquiries** — An inquiry or quote request does not create a management agreement; a written agreement defines services and fees.
- 3. **Rental prequalification** — Preliminary submission does not guarantee approval, a showing, or a reserved unit; further steps may apply.
- 4. **Vacation reservations** — Availability, price, rules, payment, and cancellation terms are shown in the applicable booking process.
- 5. **Text messaging** — Include only message categories and opt-in paths actually active; STOP/HELP and contact information must be correct.
- 6. **Accuracy and external links** — Property details may change; confirm through the leasing or booking process.
- 7. **Updates and questions** — Effective date and support contact.

Design: Same narrow reading layout as Privacy Policy. No image needed. This page does not replace a lease, management agreement, or booking agreement.

9 Asset plan

Use real approved properties rather than generic luxury stock photography. For this design preview, use visible, solid-background photo placeholders containing INSERT PHOTO, a specific image description, recommended source dimensions in pixels, display aspect ratio, and crop guidance. Inspect accessible attached photos and document suitable matches in an image inventory; do not insert them until selected for use. Preserve the placeholder area if no asset exists; do not invent a property or imply an amenity.

Asset	Suggested source size	Use
Horizontal approved logo	SVG preferred or transparent PNG at least 800 px wide	Header and footer
Main property exterior	1920 by 1200 px	Home hero
Service page hero	1600 by 1000 px	Service and About pages
Long-term and vacation property photos	1200 by 900 px	Service and listing cards

Asset	Suggested source size	Use
Bob portrait	800 by 1000 px	About page
Small supporting property image	1000 by 750 px	FAQ or form introduction

Crop responsively without stretching. Photo descriptions should match the actual scene. Website exports should use compressed responsive assets and lazy loading below the fold; avoid making the main hero image unnecessarily slow.

10 Build and launch acceptance

Build and preview the complete site in this order: shared design system and header/footer; Home and both service pages; About and FAQs; owner quote and thank-you; renter listings and prequalification; vacation rentals; legal review pages. Complete the entire preview rather than stopping after the header.

Check every route and internal link, heading order, image placeholder, visible empty state, and form/booking slot. Test at approximately 1440 px, 1024 px, 768 px, and 390 px. Check keyboard navigation, dropdowns, mobile menu, focus, contrast, reduced motion, and horizontal overflow. If a render or interaction was not tested, state that limitation clearly. Require a route-by-route section inventory, direct route loading and refresh checks, available build checks, and browser console inspection. Complete visual layout does not require invented listings or simulated integrations.

For production, confirm domain, contacts, legal/DBA identity, service area, logo permission, service scope, policies, and public property details. Test real form submission, correct thank-you routing, one owner opportunity, one note, one notification, and appropriate follow-up. Test applicant exclusion and guest consent suppression. Enable booking links only after the PMS booking, availability, payment, modification, and cancellation flows work.

The designer should deliver a ready-to-review website preview and organized exports. A website build does not itself configure GHL automations, connect channels, or establish policy approval. Track those as separate tasks with confirmed completion evidence.

11 Exact master prompt for Claude

Paste the following into Claude in VS Code and attach this revised PDF brief. The full-site scope below supersedes earlier header-only prompts.

Act as an experienced web designer and frontend developer. Build the COMPLETE Property Management Professionals website using the attached Website Master Brief as the source of truth. We already have the concept. Improve its execution while preserving its audience, confirmed services, route map, and content meaning.

Inspect the existing Property Management project first. Reuse its framework and useful components where appropriate. Work only in this project. Preserve existing files and create a revised version or make scoped edits; do not delete files or modify the separate Property Maintenance or Property Investment projects.

Design the whole website with a coherent identity: warm ivory #F8F5EC, deep navy #172D3B, restrained muted gold #AD8950, and slate body text #43535B. Use Manrope headings and DM Sans body copy unless the current

project has an approved font system. Make it distinctive through architectural alignment, typography, real property photo placement, and a consistent small gold detail. Keep the layout clean, readable, and professional for local rental owners. Vary the section layouts naturally; avoid a generic template composed entirely of repeated card grids or excessive decorative effects.

The main goal is owner management inquiries for both long-term and short-term rentals. Request a Management Quote is the primary CTA. Give long-term renters and vacation guests separate secondary paths. Keep operational system names and integration details out of visitor copy unless they help a visitor use the service.

Build all routes listed in the brief. Organize the project BY PAGE, then organize EACH PAGE BY SECTION. Keep a shared header, footer, design tokens, and common controls. Give every section a descriptive ordered filename. Assemble each page from its sections. Do not place the complete site into one giant HTML file.

Also provide an exports/ghl directory with per-page folders and separate GHL Custom JS/HTML section snippets. Scope all styles and behavior to avoid affecting other elements. Use explicit solid backgrounds on the website, header, footer, and every section wrapper, including exports. Match the GHL host section/row backgrounds to the preview. This corrected brief replaces all earlier transparent-background instructions. Generate these exports from the same design and content so they do not drift from the preview. Include a section inventory and GHL installation guide.

Use the page content, image descriptions, dimensions, and route map in the brief. Use designed photo placeholders throughout the preview until I select actual images. Each must visibly contain INSERT PHOTO, a specific description, recommended source dimensions in pixels, display aspect ratio, and crop guidance. Inspect accessible attached photos and record suitable slot matches plus their actual dimensions in an image inventory; do not assume their identity or insert them automatically. If the approved logo is missing, use a clean text wordmark. Do not invent testimonials, statistics, guarantees, fees, availability, towns, property amenities, contact details, or legal identity. Use honest empty listing states until current details are approved.

Reserve a dedicated GHL owner form slot, a separate applicant form slot, and an approved PMS booking destination or widget slot. Build clearly marked preview states; do not fake successful submissions or working reservations. GHL handles owner leads and permitted guest marketing; DoorLoop handles long-term leasing; OwnerRez is the planned STR booking system. No PMS connection or marketing permission should be implied by the design.

Complete the ENTIRE WEBSITE PREVIEW in this task. Do not stop after the header or require approval between every section. Make routine design decisions using the brief, and list missing launch information separately. Do not publish, connect services, change GHL workflows, or insert credentials into frontend code.

Apply the detailed visual specifications and acceptance checklist in Section 13. Preserve one folder per page and one independently editable file per section. Scope section selectors, custom properties, and JavaScript behavior locally. Assemble all 13 routes into complete pages with shared navigation; separate files alone are not the finished result. Audit existing missing sections, broken imports, route failures, console errors, overlap, and mobile overflow, then fix and verify them. Keep existing files and unrelated projects intact.

Render and test every page at desktop, tablet, and mobile widths. Check links, accessible menu/dropdown behavior, keyboard focus, readable contrast, responsive images, and overflow. Fix issues you find. If you cannot render or test a part, state exactly what remains unverified rather than claiming it passed.

Implement the basic SEO requirements in Section 12. Give every public route unique page metadata, one clear H1, logical section headings, crawlable internal links, and readable HTML content. Keep page-level SEO settings separate from reusable GHL section snippets. Include an SEO settings inventory and launch checklist. Protect the

preview from indexing, and document the exact production changes needed before launch. Do not claim that indexing, rankings, or live GHL settings have been verified by building a local preview.

At completion, show me the preview or the exact file/run command to open it. Provide the page folders, section files, GHL export locations, a short installation guide, and a concise list of remaining items before launch. Keep explanations beginner-friendly.

12 Basic SEO review and implementation

Review result: the proposed content is suitable as a basic SEO starting point. It gives owners, renters, and vacation guests separate destinations, uses the confirmed regional focus, and already supplies unique page titles and descriptions. The following requirements complete the build instructions. This is a review of the website brief, not a live-site audit or a search-volume study.

A. Page intent and keyword map

These are suggested themes based on the services in the brief. Search volumes, competition, and rankings have not been measured. Use variations naturally; do not repeat every phrase on every page. East Central Minnesota remains the location modifier until Bob confirms individual towns served.

Page	Primary theme and intent	Supporting themes
Home	Property management in East Central Minnesota; owner overview	Rental property management; long-term management; vacation rental management
Long-Term Rental Management	Long-term rental management in East Central Minnesota; owner services	Leasing coordination; tenant communication; rental maintenance coordination
Short-Term Rental Management	Short-term rental management in East Central Minnesota; owner services	Vacation rental management; guest communication; turnover coordination
About	Property Management Professionals; business identity	Local property management team; Bob Blaisdell; property care approach
FAQs	Property management questions; owner and visitor guidance	Management fees; service area; rental management process
Management Quote	Property management quote; owner inquiry	Management consultation; rental management services; property-owner inquiry
Available Rentals	Available long-term rentals in East Central Minnesota; renter search	Homes for rent; rental availability; rental prequalification
Rental Prequalification	Rental prequalification; applicant next step	Preliminary rental inquiry; showing process; application steps
Vacation Rentals	Vacation rentals in East Central Minnesota; guest search	Vacation homes; places to stay; property booking information

Thank-you pages are utility pages, not keyword targets. Privacy and terms serve transparency. Do not add thin city pages, fabricated addresses, unsupported amenities, or claims of current listings to expand search coverage.

B. Content and headings

- Use the page titles and descriptions already supplied in the content map. Each live route needs its own descriptive title and description. Length is a writing guideline, not a fixed Google ranking rule; keep important wording early and readable.
- Use one clear visible H1 for each page as a site convention, followed by logical H2 and H3 sections. Separate GHL snippets must not each add another H1. Use real heading elements rather than styling ordinary text to look like headings.
- Place the service and regional wording naturally in the title, opening, and relevant sections. The long-term page opening already mentions East Central Minnesota; keep it. Do not add keyword density targets or meta-keyword tags.

- Keep editorial notes, placeholder dimensions, claim checks, and the held guaranteed-rent question out of published copy. Confirm actual service scope, fees, towns, identity, and public listing details before launch.
- Describe actual approved photos with useful alt text. Use empty alt text for decorative images. Do not load every alt attribute with city or service keywords.

C. Internal links

- Use real HTML anchor links with href destinations for navigation and CTAs that change pages. Do not rely only on JavaScript click handlers. Use descriptive text such as Explore Long-Term Management.
- Home links to both service pages, the quote page, and rental destinations. Each service page links to the quote, FAQs, and the other service where useful. About links to both services and the quote. FAQs links to the relevant next step for each audience.
- Available Rentals links to approved details and prequalification. Vacation Rentals links to approved property booking pages, and offers a separate owner-management path. Avoid publishing dead placeholder links or empty # destinations.

D. Page settings and technical implementation

- In GHL, configure title, description, indexing, canonical URL, and social preview at the actual page or site level using the available controls. Record each setting and any unsupported control in the installation guide. Do not insert duplicate head metadata into every Custom JS/HTML section.
- For the standalone preview or final coded site, use page-specific head metadata. Prefer rendered HTML content available on initial load. If the existing framework relies on JavaScript, verify Google can render the real page content after publication; use static generation or server rendering when suitable.
- Every route must open directly and survive a refresh. Production pages should return the proper status: 200 for real pages, 404 for missing pages, and appropriate permanent redirects for moved URLs. A missing route must not silently display Home.
- Choose one confirmed HTTPS domain and consistent URL format. Use absolute canonical URLs for the chosen production pages; do not canonicalize all pages to Home. Do not invent the management domain or publish localhost/preview canonical URLs.
- Create or verify an XML sitemap containing the final indexable canonical URLs. Exclude thank-you pages, noindex pages, and preview URLs. Verify robots.txt allows the required public content and rendering assets to be crawled.
- Keep public previews, test pages, and policy review drafts out of search results. Use access control when available; noindex is an indexing instruction, not privacy protection. robots.txt alone does not guarantee removal from search results. Leave a noindex page crawlable so Google can read its instruction.
- Use noindex for both thank-you routes. At launch remove preview-wide noindex only from approved public pages, while retaining it for utility or unfinished pages. Inspect the actual live HTML or response headers, not just the local source.
- Compress property photos, supply width and height, serve appropriately sized images, and lazy-load below-the-fold images. Load the main hero without unnecessary delay. Test readable mobile layouts, image stability, forms, menus, and page performance.
- Use verified business name, phone, service area, and legal identity consistently. Business Profile setup and structured data are separate tasks. Do not invent a public office address, reviews, star ratings, or schema properties to make the preview appear complete.

E. Launch verification and ownership

Claude prepares the page metadata inventory, route/link checks, section heading checks, and proposed sitemap or GHL configuration notes. Jocel applies or confirms the live page settings during installation. Bob confirms the

business facts and service scope. A local website build cannot demonstrate that the live GHL site is crawlable or indexed.

- Before launch: verify approved domain, HTTPS, unique metadata, headings, real internal links, mobile display, contact details, and absence of editorial notes.
- At launch: verify live status codes, canonicals, robots rules, sitemap, indexing instructions, and working forms/booking destinations. Noindex the preview and thank-you pages as described above.
- After launch: verify the site in Google Search Console, submit or confirm the sitemap, and use URL Inspection for Home and both management service pages. Check rendered content and any indexing issues.
- Over time: review relevant Search Console queries, impressions, clicks, and owner inquiries. Improve useful content based on actual performance; do not promise rankings or treat sitemap submission as a guarantee of indexing.

F. Official SEO references

Reviewed September 30, 2026. These sources support the technical guidance; the keyword themes above are proposed business-specific choices, not findings from these sources.

13 Corrected visual build specification

This is the final design direction. Use the content and route map in this brief, with solid backgrounds and complete assembled pages. All older transparent-background instructions are superseded. Real photos and live integrations can be added later without leaving the rest of the visual website unfinished.

Solid backgrounds and readable colors

Element	Solid background	Text / accents
Page and main sections	#F8F5EC ivory	#172D3B headings; #43535B body
Header and light sections	#FFFEFB warm white	#172D3B navigation; navy primary CTA
Selected alternate sections	#E9EDE9 sage gray	#172D3B headings; #43535B body
Footer and emphasis sections	#172D3B deep navy	#FFFEFB text; restrained gold detail
Photo placeholders	#E9EDE9 sage gray	#172D3B descriptive labels
Primary buttons	#172D3B deep navy	#FFFEFB text; visible focus state

Gold #AD8950 is primarily decorative. Use bronze #70562B for small accent text on light surfaces when contrast passes. Every section wrapper gets a solid fill; avoid unexplained background gaps between GHL rows.

Transparent logo assets remain acceptable because the header behind them is solid.

Typography and spacing

- Headings: Manrope, weights 600-700. Body: DM Sans, weights 400-500. Navigation and buttons: weight 600. Load only the required weights and use Arial, sans-serif as fallbacks.
- Body text: 18 px desktop, 16 px mobile, line height 1.6. Keep reading paragraphs around 60-70 characters wide.
- Home H1: approximately 56 px desktop, 36 px mobile, line height 1.1-1.2. Other-page H1: 44 px desktop, 32 px mobile. H2: 32 px desktop, 26 px mobile. H3: 22 px desktop, 20 px mobile. Use responsive sizing and adjust for actual copy to prevent overflow.
- Content width: up to 1200 px; reading pages approximately 760 px. Side padding: 32 px desktop, 20 px mobile. Section padding: generally 72-88 px desktop and 40-56 px mobile. Keep forms and policy pages compact. Use a consistent 8 px spacing scale, with sensible exceptions.

Photo placeholders visible in the page

Use Section 9 source sizes. Each slot must reserve its intended area and show its own label. Recommended source dimensions are not fixed on-screen dimensions; scale the display responsively.

- Home hero: INSERT PHOTO - Actual managed rental exterior in natural daylight. Recommended source: 1920 x 1200 px. Display ratio: 8:5. Keep the building near the center for mobile cropping.
- Service hero: INSERT PHOTO - Actual long-term rental or vacation property appropriate to this service. Recommended source: 1600 x 1000 px. Display ratio: 8:5. Preserve important architectural details.
- Supporting/property card: INSERT PHOTO - Specific approved room or exterior suitable for this section. Recommended source: 1200 x 900 px. Display ratio: 4:3. Do not crop out the feature described.
- Portrait: INSERT PHOTO - Bob approved professional portrait. Recommended source: 800 x 1000 px. Display ratio: 4:5. Keep face and shoulders comfortably framed.
- Small supporting image: INSERT PHOTO - Actual property detail relevant to the nearby content. Recommended source: 1000 x 750 px. Display ratio: 4:3.

Tailor descriptions to each slot rather than repeating these examples everywhere. For attachments, record filename, actual dimensions, suggested slot, recommended crop, and approval status. If a photo cannot be

inspected, mark it unreviewed. Do not distort photos, invent amenities, or assume property names. Remove preview labels after approved image replacement and add accurate alt text.

Independent files and complete pages

- Each route has its own page folder and assembly file. Each section has an ordered descriptive file plus locally scoped styles and behavior. Header/footer remain documented shared components. Shared branding changes intentionally affect multiple pages; ordinary section edits must not restyle siblings.
- Avoid globally named classes, document-wide click handlers, and section scripts that select another section. Use unique wrapper identifiers and local custom-property overrides where appropriate. Test the assembled page and each exported snippet; file separation alone does not prevent style leakage.
- Every preview route must contain its required sections, header, footer, and usable navigation. Do not deliver disconnected snippets as the only visual output. Include an accurate route/section inventory and a beginner-friendly guide to which files to edit.

Completion acceptance

- All 13 routes and their required sections exist, and every route opens directly and survives a refresh.
- Solid backgrounds, typography, spacing, and visible photo descriptions/dimensions match the preview and GHF exports.
- Desktop, tablet, and mobile views are inspected. Menus, focus, links, layouts, and overflow are checked. Available build checks and console inspection are completed; failures are fixed.
- Owner inquiry and renter prequalification remain separate. Missing form/PMS configuration is labeled; submission, consent, availability, and payment success are never simulated.
- Policy pages remain review drafts until approved, and unverified listings use honest empty states. These facts do not prevent completion of the rest of the design.
- Deliver the navigable preview, page/section files, GHF exports, image inventory, installation guide, SEO settings inventory, and a precise list of unverified checks or external launch tasks.
